Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Mark Wilson during a telephone interview on March 27, 2009.

The application has been amended as follows:

In the specification:

Page 1, line 1, insert the sentence "This application is a 371 of PCT/IB03/02022 filed on May 16, 2003".

Replace Claim 1 with the following:

-- 1. (currently amended) A data carrier comprising a circuit, which circuit comprises the following components:~~;~~~~namely~~

a first memory device means, which is ~~are~~ designed for modifiable storage of information, the information being modifiable by an ambient parameter of the circuit, which ambient parameter acts on the first memory device means, characterized in that the first memory device means comprises a test memory area, which is provided for storing test information, wherein the first memory device means comprises multiple data

Art Unit: 2863

sectors and wherein the test memory area comprises data sector-specific test memory areas within each of the multiple data sectors, wherein the test information is stored within the data sector-specific test memory areas and wherein the data sector-specific test memory areas are located in an area of each data sector that is designated for access control, and

a second memory device is ~~means are~~ provided which is ~~are~~ designed for unmodifiable storage of reference information, and

detection means are provided, to which the test information which may be read out from the first memory device ~~means~~ and the reference information which may be read out from the second memory device ~~means~~ may be supplied, and said detection means ~~which~~ are designed, with the aid of the read-out test information and the read-out reference information, for detecting ~~to detect~~ a modification of the originally stored test information brought about by an ambient parameter acting on the first memory device ~~means~~. --

In Claim 3:

Line 2, delete "the purpose of".

In Claim 4:

Line 4, after "memory", replace "means" with – device --.

Replace Claim 6 with the following:

Art Unit: 2863

-- 6. (currently amended) A circuit, which circuit comprises the following components;
~~namely~~

a first memory device means, which is ~~are~~ designed for modifiable storage of information, the information being modifiable by an ambient parameter of the circuit, which ambient parameter acts on the first memory device means, characterized in that the first memory device means comprises a test memory area, which is provided for storing test information, wherein the first memory device means comprises multiple data sectors and wherein the test memory area comprises data sector-specific test memory areas within each of the multiple data sectors, wherein the test information is stored within the data sector-specific test memory areas and wherein the data sector-specific test memory areas are located in an area of each data sector that is designated for access control, and

a second memory device is means ~~are~~ provided which are designed for unmodifiable storage of reference information, and

detection means are provided, to which the test information which may be read out from the first memory device means and the reference information which may be read out from the second memory device means may be supplied, and said detection means ~~which~~ are designed, with the aid of the read-out test information and the read-out reference information, for detecting ~~to detect~~ a modification of the originally stored test information brought about by an ambient parameter acting on the first memory device means;

Art Unit: 2863

wherein the ambient parameter is one of a short-wave light, an electromagnetic field, and a high temperature. --

In Claim 8:

Line 2, delete "the purpose of".

In Claim 9:

Line 4, after "memory", replace "means" with -- device --.

Reasons For Allowance

The **combination** as claimed wherein a data carrier comprising a circuit comprising test information is stored within the data sector-specific test memory areas and the data sector-specific test memory areas are located in an area of each data sector that is designed for access control (claims 1, 6) is not disclosed, suggested, or made obvious by the prior art of record.

Fougroux et al. (US 2002/0108051), a US equivalent of FR 2 810 138, discloses a method for secure storage of sensitive data (Abstract, lines 1-2). The memory (M) comprises two distinct storage devices (1, 2), permanent memory of the ROM type (1) and a re-programmable memory of the EEPROM type (2). Fougroux et al. further

Art Unit: 2863

discloses a comparison between said informational read and the result of checksum operation with each use of said sensitive data (paragraph 0028, lines 10-14).

Geronimi (US 5,471,045) discloses a smart card locking process comprising a ROM memory (Abstract, lines 1-4).

Posch (US 2001/0028691) discloses a data carrier adapted to receive data in form of data blocks (Abstract, lines 1-2).

However, none of the above references discloses test information being read-out for detecting a modification of the originally stored test information, the test information being stored within the data sector-specific test memory areas and wherein the data sector-specific test memory areas are located in an area of each data sector that is designated for access control.
